CG2 manual v4 · review and Glaze Search, on this PC and online

2026-10-21 · replaces manual v3 · step-by-step details of the search page: CG2_Glaze_Search_Beginner_Guide.pdf · all PDFs online: `https://fbiwarninggg-ceramic-review.static.hf.space/docs/index.html`

0. What changed since manual v3

topic	manual v3 said	now (v4)
where	both apps run only on this PC	review page also online: `https://fbiwarninggg-ceramic-review.static.hf.space` ; Glaze Search online: `https://fbiwarninggg-glaze-search.hf.space`
Tile review	local panel, saved to `review\tile_review.json`	the same panel online too; online saves go to Supabase and **SYNC_ONLINE_REVIEWS.bat** brings them back
choosing the object	object chips under the photo	hover / click / `Ctrl`+click on the photo; the active object is outlined in yellow
colours from the photo	eyedropper	**Pick colour (HEX)** mode in card 1, then **Add as search colour**
modes	four modes with fixed weights	mode buttons = presets of three **priority sliders** (shape / glaze / colour, always add up to 1)
results check	Hit@K / P@K per ticked feature	evaluation of every search by shape, glaze / surface, colour, strict and weighted nDCG; contribution bars per result
session table	"Recall@K" over searches	renamed **Hit Rate@K**; Precision@K and the real Recall@K (true recipe) added
colour words	Color Lab V3 from the folder *Test the Color*	Color Lab V3 ships with the project (`third_party\color_lab_v3`)

1. Start

what	how
review app on this PC	`OPEN_REVIEW_APP.bat` → http://127.0.0.1:8765
Glaze Search on this PC (GPU, ~4 GB)	`RUN_GLAZE_SEARCH.bat` → http://127.0.0.1:8770
review page online (anyone views, editors sign in)	`https://fbiwarninggg-ceramic-review.static.hf.space`
Glaze Search online (free GPU, daily allowance per visitor)	`https://huggingface.co/spaces/FBIWarninggg/glaze_search` (log in for more GPU time) · direct: `https://fbiwarninggg-glaze-search.hf.space`
bring online decisions + tile reviews to this PC	`SYNC_ONLINE_REVIEWS.bat` (shows the changes first, then asks)
upload the review page after changes	`UPLOAD_WEB_PACED.bat` (only changed files)

what	how
upload Glaze Search (page + code; data)	`.venv\Scripts\python.exe scripts\28_publish_glaze_zero.py` · add `--only data` for the data

> One GPU program at a time on this PC: close Glaze Search before a GPU pipeline run.

2. Review page (on this PC and online)

Both pages show every photo with its object crops, colours and attributes. On this PC everything is saved at once; online, **anyone can view** and **editors** sign in with their email + the editor code from the admin.

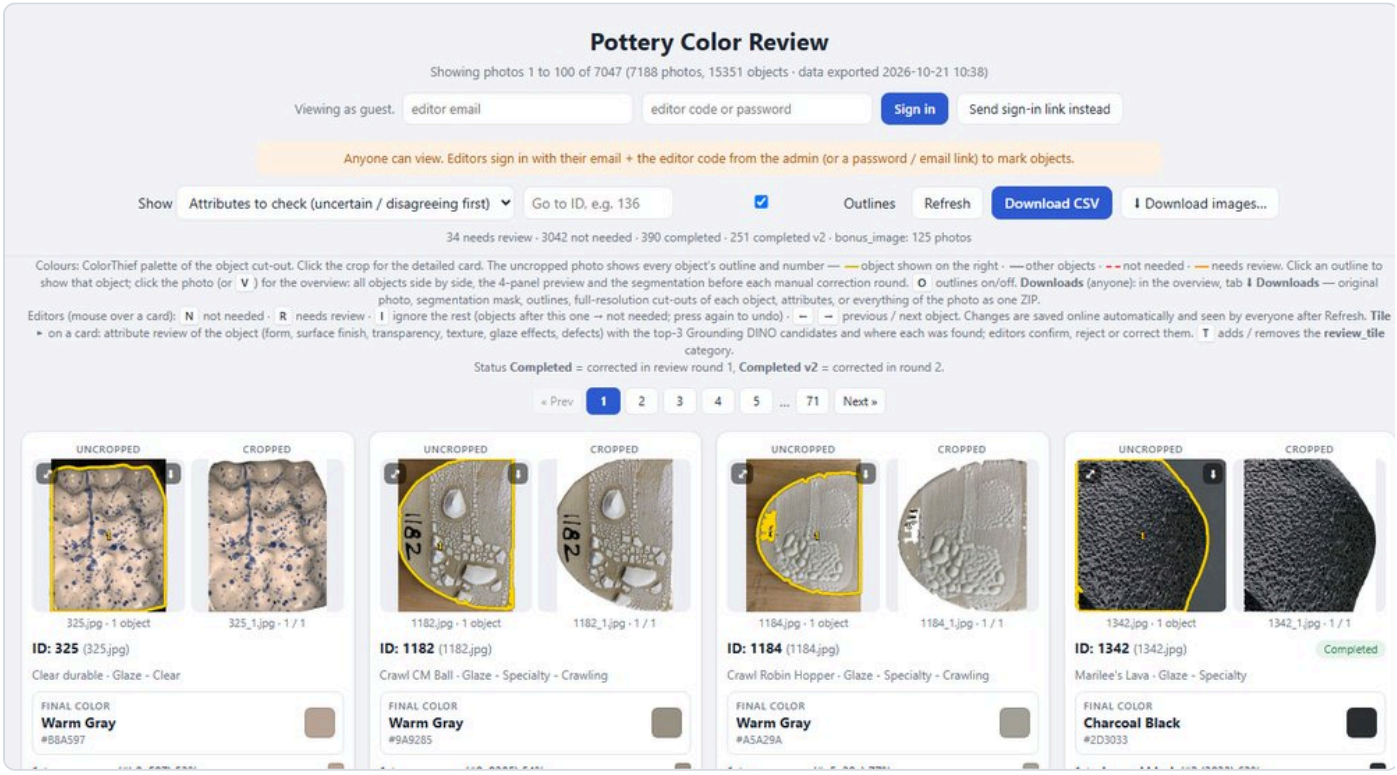

Online: sign in with email + editor code (put the code in the password box)

Show filter

To review · Bonus images (125 new photos) · Needs review · Unreviewed · Not needed · Completed / Completed v2 · Corrected segmentation · **Review tile (category)** · **Attributes to check** (most uncertain first) · *All photos.*

Keys (mouse over a card)

key	does
`N`	not needed (press again: restore)
`R`	needs review + note
`I`	ignore the rest of the photo's objects (again: undo)
`T`	add / remove the **review_tile** category
← →	previous / next object
V · O	overview of the photo · outlines on / off

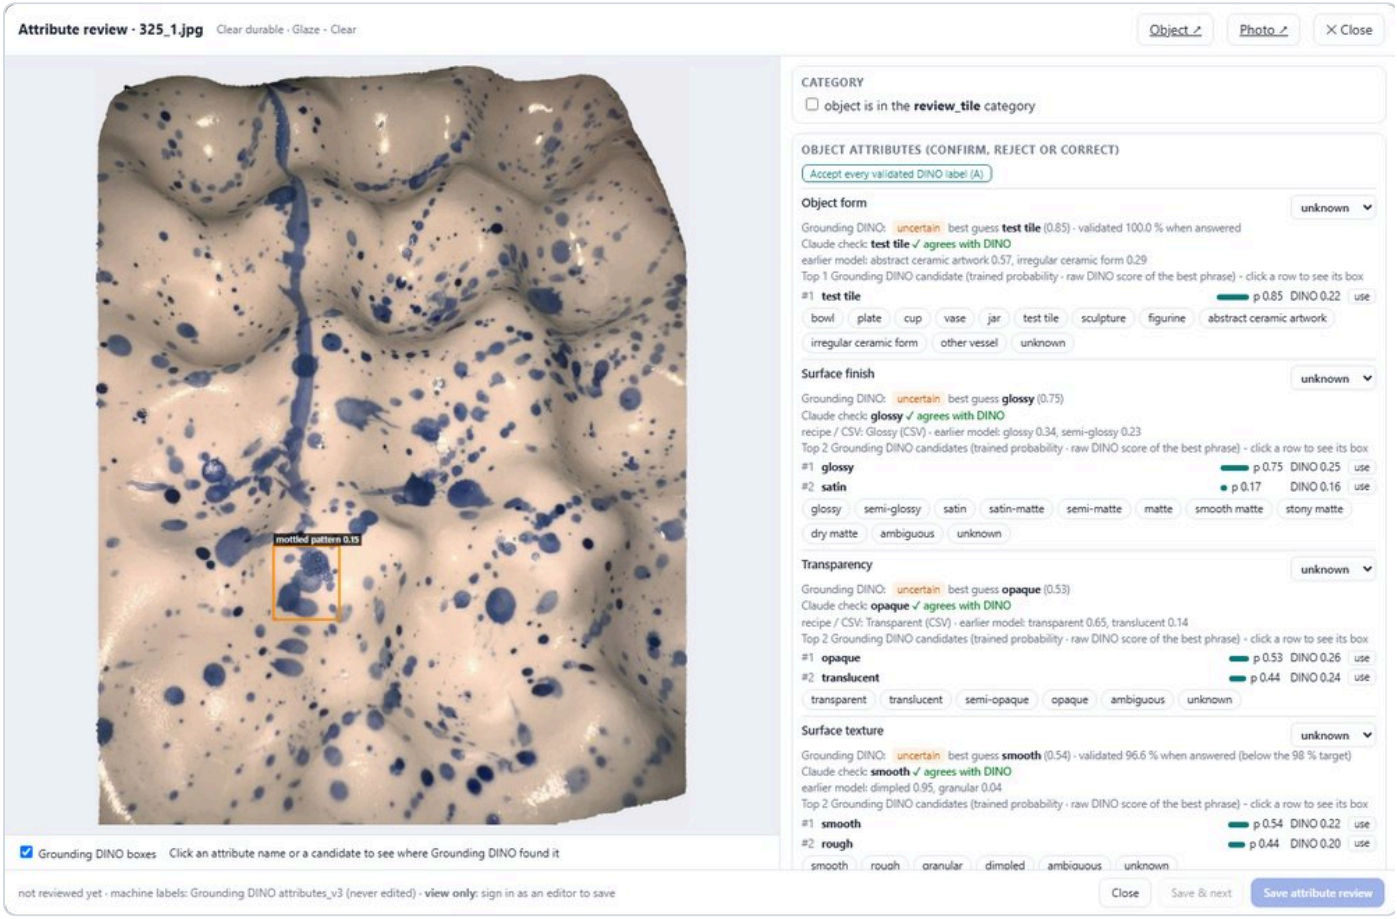

Online review page: filter 'Attributes to check', the Tile help line and the cards

Tile ▸ - attribute review of one object

1. For each of the six attributes: Grounding DINO's label (*validated* or *uncertain*), Claude's check, recipe / CSV and the earlier model.

2. **Top Grounding DINO candidates** (rank, trained probability, raw DINO score): **click a row** to see its box on the cut-out; **use** sets it as your value.
3. Or click any value chip, or **Accept DINO** / A for validated labels; set the status (confirmed / rejected / corrected / unknown).
4. **Save attribute review** or **Save & next**. The review status of the object and its files are never changed by a Tile review.

Online Tile panel (same as the local app): candidates per attribute, the clicked candidate's box on the cut-out

Saving online, and back to this PC

SQL file (web\)	what it does	run
supabase_setup.sql	decisions table, editors, history	done (2026-10-16)
supabase_editor_codes.sql	sign-in with email + editor code	done
supabase_tile_reviews.sql	**Tile reviews online** (table `tile_reviews` + `tile_save`, with history)	**once, now**: Supabase → SQL Editor → New query → paste → Run

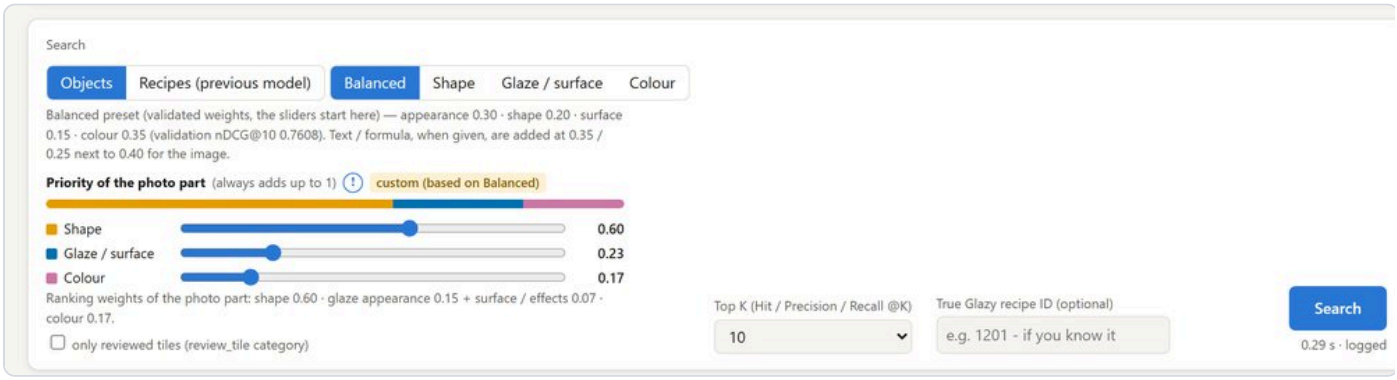

Until `supabase_tile_reviews.sql` is run, the online page shows the Tile panel but says that saving is not set up yet. Afterwards: online Tile saves are kept in Supabase with their history; **SYNC_ONLINE_REVIEWS.bat** imports them into `review\tile_review.json` (the newer of online and local wins; every import is added to the history file) together with the online decisions.

3. Glaze Search

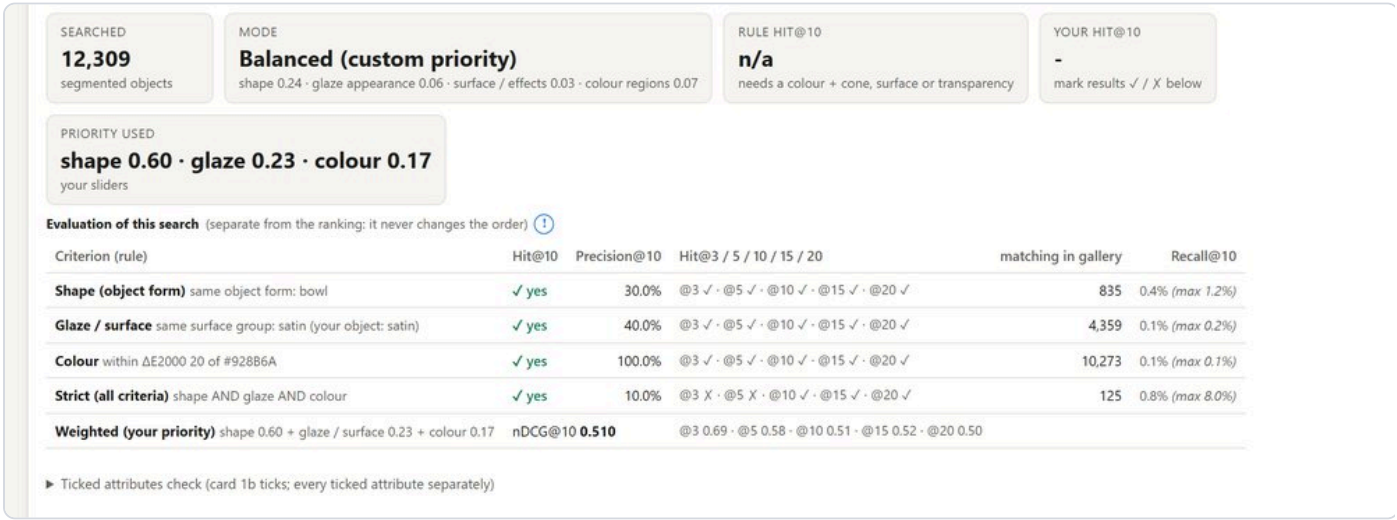

Same page on this PC and online. Online it runs on Hugging Face's free GPU (ZeroGPU): every visitor has a small daily GPU allowance; a new photo uses about 2 - 30 s of it (objects found and the first objects described in one GPU call), clicking those objects, the sliders and searching use none. Open it on https://huggingface.co/spaces/FBIWarninggg/glaze_search and log in to huggingface.co for a larger allowance. Uploads and the session log are cleared when the Space restarts.

1. **Card 1 · photo**: drop, `Ctrl+V` or a link. Hover an object to see it; **click** = use it (yellow = active), `Ctrl+click` = add more. The search uses the active object. **Pick colour (HEX)**: click inside an object → the colour averaged inside its outline → **Add as search colour**.
2. **Card 1b**: the six attributes with their top-3 candidates; click the right one; **(i)** explains exactly that value (probability, Grounding DINO score, accuracy). Tick the attributes the results must share.
3. **Cards 2 - 4**: text, formula and colours (colour words from Color Lab V3, e.g. celadon, crimson, eggshell).
4. **Search bar**: a preset or your own priority with the sliders, Top K, the true Glazy recipe ID if you know it.

preset	shape / glaze / colour	use it for
Balanced	0.20 / 0.45 / 0.35	the same glaze on a similar object (default)
Shape	0.65 / 0.20 / 0.15	the same kind of object
Glaze / surface	0.05 / 0.85 / 0.10	the same glaze look, any colour shift
Colour	0.05 / 0.15 / 0.80	anything in these colours

Presets and priority sliders (moving one slider shrinks the other two in proportion)

Evaluation of every search: per criterion Hit@K, Precision@K, matching objects, Recall@K; weighted nDCG

Evaluation never changes the order. Hit Rate@K (session) = share of searches with a relevant result in the top K; Precision@K = share of the top K that is relevant; Recall@K = share of all relevant objects in the top K (real recall: the true recipe's objects).

4. Uploading (Hugging Face, free account)

> Both uploaders send only new or changed files, 1,000 files per commit. Before every commit they count the commits of the last hour in all four repos (review page + Glaze Search) and pause **62 minutes** at **127** (the limit is 128), then continue by themselves; a "429" answer also waits 62 minutes. Rerun at any time to continue. Your login stays on this PC (`hf auth login`); never paste a token into a chat.

If someone edited the online `index.html` directly on Hugging Face, the review uploader stops instead of overwriting it: copy the online version into `web\site_template\index.html` first.

5. Where things are

what	where
review decisions (master)	new image data\full_segmentation_claude_process\review\object_review.csv
tile reviews (+ history)	...\review\tile_review.json · tile_review_history.jsonl
online settings (no passwords)	code_project\web\publish_settings.json
Glaze Search uploads + session log	multimodal_experiments\work\queries\
upload log (both uploaders)	D:\NUS study\CG2\web_review_export\upload_paced.log

6. Which PDF to read

PDF (docs\CG2_PDF_reports)	status
CG2_Manual_v4_Review_and_Search.pdf	**current** - this manual
CG2_Glaze_Search_Beginner_Guide.pdf	**current** - every part of the search page, step by step (v4)
CG2_Flow_MindMap.pdf	**current** - the flow of the project on 5 pages (+ PNG per page)
CG2_Attributes_v3_MindMap_Report.pdf	current - how the six attributes were trained and measured
CG2_Manual_v3 / v2, CG2_User_Manual_Review_and_Search	superseded by this manual (kept as history)
